The latest area of the atmosphere of the Earth has become defined by the kÁimÁfá é ” N line, which runs around 62 miles miles The average level of the sea of the earth and is named after the physical hunaro theodore von kÁjámán. After all, you are tu and me, right? Please. And much you have left the days when everything that Twinkles is a star. We have already tangled this last, letting someone throw something in our shared environment for too long. And while those SpaceX releases will surely bewater more debris in the sky over us, the other project of Musk, Starlink, promises to take a more direct approach to discharge our starry sky. But not everyone subscribes to the idea that space is the space in humanity: an international park above our heads that must be conserved and, at least, developed with contributions from all its shareholders, as, we like them. Let someone do what they want with our shared environment has not worked so well. Only a few of his telecommunications satigns are in norange and are already visible to the naked eye. In fact, you could easily separate the good wishes in the counterfeit constellation of Elon Musk, a 12,000 satigan communications system, which is established to shine in the Earth's oRBITA in the middle of the 2020. o DISCOT-BALL -Slinging Peter Beck. Continue with desire and dream and be inspiring to do impossible things. Like Elon Musk and SpaceX. Everything seems to point to the starry sky as a new and wild border where those who have the ability to bet a claim so that it simply does. It is filling there. Just do not do it. “However, before this almost inconceivable insignificance, humanity is capable of large and friendly things when we recognize that we are a species, responsible for the attention between Sá, and our planet, together”. Do we really need someone to hang a disco ball in the middle of our Streetled sky to be reminded of that? thank the same starry sky that hangs us all for the nightly reminder that there is no limit to what we can do.
